RemSense Technologies partners with Amazon subsidiary to extend Virtual Plant product further into the metaverse

RemSense Technologies Ltd (ASX:REM) has extended its relationship with technology and engineering company Matterport Inc and joined Amazon Web Services' (AWS) partner network.

The company is working with the Amazon subsidiary to extend the development of its flagship digital twinning product, Virtual Plant, in its roadmap for the first half of this year.

Enhanced Virtual Plant

Virtual Plant - which enables organisations to access their secure data anywhere, using existing hardware, software and networks - will have enhanced capabilities to provide a scalable enterprise-grade solution for clients.

Managing director Steve Brown said: "The decision to collaborate with AWS and develop the next release of Virtual Plant in the AWS environment enables us to integrate Virtual Plant more easily with our clients' existing enterprise resource planning (ERP) systems and asset management solutions.

"Our full integration through Matterport and the common development platform provided by AWS both simplifies and extends the reach and capability of our industrial Virtual Plant product. The collaboration with AWS is a key step in our ongoing development of the industrial metaverse."

Matterport marketplace

REM has also extended its partnership with leading spatial data company Matterport Inc. to include full participation as the lead industrial partner promoted in the Matterport Marketplace.

The Matterport Marketplace only features top-tier partners and provides prospective clients with increased market awareness and direct access to RemSense and Virtual Plant.

The marketplace will launch in the second quarter of 2022. Matterport has extended its own relationship with AWS as a launch partner for AWS's IoT TwinMaker, a complementary product to Virtual Plant.
